EVA YANG

SENIOR SUPPLY CHAIN & S&OP PLANNER

PROFESSIONAL SUMMARY

Supply chain professional with **5+ years** across semiconductor fabrication and large-scale industrial NPI programs. I own material planning for a **high-volume wafer fab** — MRP signals, safety stock, shortage recovery — and ran supplier-side procurement for Tesla, Rivian, and Faraday Future programs: **945 PO lines to 57 suppliers, ~$10M**, **~20% cost reductions**. Everywhere I have worked, I have built the systems the operation runs on: a **live SQL-backed company platform** (**rbrpmrealty.com**, **196-table PostgreSQL on Azure**, built with AI assistance), a **SharePoint and Power Automate procurement workflow system** built from zero after hours that the team still uses, **supplier KPI and risk dashboards** that grew visibility 2.5×, and a **160-page, 114-task, four-phase Odoo ERP implementation** I led as a systems project. I co-own a property management company whose entire platform I designed and launched. **M.S. Mathematics:** I learn whatever the problem demands, and I own things end to end without waiting for permission.

PROFESSIONAL EXPERIENCE

Material Planner

Dec 2023 – Present

INFINEON TECHNOLOGIES → SKYWATER → IonQ · Austin, TX

Employer changed through corporate acquisitions

Material planner for a high-volume wafer fab: specialty gases, CMP slurry, photoresist, and process chemicals run on MRP signals I own, backed by Excel-based analytics I built.

- Built the trustworthiness of our supply signals: redesigned the zero-bin risk dashboard from legacy historical-usage logic, expanding visibility from **about 100 to about 250 items** — new materials included, demand signals, open POs, supplier confirmations, and physical inventory in one model instead of manual patches.
- Built a **depletion model in Excel** from on-hand inventory, in-transit POs, and confirmed deliveries that flagged a single-source chemical stockout **weeks before the ERP did**. I led the daily cross-functional recovery with engineering, procurement, warehouse, and the supplier — **production never stopped**.
- Turned **BOMs** and engineering requirements into supplier plans: executed materials change control through **two corporate acquisitions** — part lists confirmed, material movement sequenced — **continuity held** through new **ERP**/MRP workflows.
- Manage **supplier execution day to day**: place and expedite POs, track vendor performance on delivery, quality, and cost, and escalate with data when commitments slip.
- Led the **portfolio-wide safety-stock rebuild**: recomputed reorder points, min/max, and safety stock from **12 months of consumption**, then moved materials to **MRP auto-release** — the weekly **weeks-of-supply dashboard** now feeds S&OP and MPS decisions.

Portfolio: rbrpmrealty.com · GitHub: github.com/yangkeren0720 — live sites and tools I designed and shipped.

CORE COMPETENCIES

- Material Planning & MRP
- Procurement & Strategic Sourcing
- **PO-Invoice-Approval Reconciliation**
- KPI Dashboards and Risk Analytics
- Depletion and Safety-Stock Modeling
- **BOM Lineage** and Change Control
- Cost Optimization and Value Engineering
- **ERP** Implementation & Design (Odoo)
- **AI-Assisted Tool Building** (Claude Code, Codex)
- Advanced Excel, SQL, Data Modeling
- SharePoint, Power Automate
- International Logistics & Trade Compliance

EDUCATION

Illinois State University

M.S. and B.S., Mathematics

2021 · GPA 3.7

Illinois Wesleyan University

B.A., Mathematics & Music,

Minor in Computer Science — 2019

ASCM

Supply Chain Planning Certificate — 2023

Office Manager (Part-time)

Feb 2026 – Present

Belong Automotive Technology LLC · Austin, TX

- Lead **5 direct reports** and run **full-cycle hiring and onboarding**; report to the US CEO and work with US and China leadership.
- Led **ERP** implementation as a systems project: drove Odoo selection and rollout through a **160-page plan with 114 tasks across four phases** — system design, production feasibility assessment, and cross-functional deployment across operations, warehouse, and finance.
- Manage day-to-day operations and the warehouse **(receiving, inventory, outbound)** across operations, IT, HR, and warehouse; own facilities and office procurement — vendor pricing, contracts, **international logistics and trade compliance**.

Co-Owner and Property Manager

2023 – Present

RBR PM REALTY · Manor, TX · Co-owned student-housing business

Built the company's property management platform: public website, admin system, and iPhone/iPad app (2026) — designed, specified, tested, and launched by directing **AI coding agents (Claude Code + OpenAI Codex)**: one builds, one reviews. **Tech:** JavaScript (Node.js), SQL, Python, Swift (iPhone/iPad app), HTML/CSS · Next.js 15 / React 19, PostgreSQL on Azure (Prisma), Azure, GitHub Actions (CI/CD), DocuSign API, Microsoft Graph / Entra ID, OpenAPI, Claude API. AI tools: Claude Code (Opus 5.5), OpenAI Codex.

- Run **8 houses and 41 rooms** at **~$400K annual rent** and **~93% occupancy** (2026, up from 86% in 2024); shipped **364 live updates in 7 months**.
- Built the end-to-end leasing pipeline (application, lease generator, DocuSign, TenantCloud) holding **187 leases since 2023**: hands-on work per lease cut from **~1h40m to ~15min**, ~180 hours/year saved.
- Directed the two-model AI dev team (Claude Code builds, Codex reviews): written briefs, cross-model review, isolated test DBs, nightly releases on my approval — **100+ scoped AI work threads in 10 days**.
- Added **19 AI-powered features** incl. **3 TenantCloud robots**; migrated everything to a **196-table PostgreSQL on Azure** (111 migrations, 9 data-move batches).
- Shipped a native **32-screen iPhone/iPad app** on **184 OpenAPI endpoints**; fixed **36 audit issues** (7 urgent), verified by **~39,000 automated checks**.

Purchasing Analyst

Jun 2021 – Oct 2023

MINO AUTOMATION USA · Tesla / Rivian / Faraday Future programs

- Rivian BIW (Normal, IL) — managed **945 PO lines to 57 suppliers totaling ~$10M** across seven lines: sourced and qualified suppliers, controlled long-lead equipment procurement, held vendors to schedule and terms, coordinated **300+ technicians** through installation and launch.
- Tesla Cybertruck BIW (Austin, TX) — negotiated **~20% cost reduction** with coverage and schedule held; deployed **179 contingent resources** to milestones; managed logistics for **34+ industrial equipment rentals**.
- Taught myself **SharePoint and Power Automate** after hours and built the **central procurement workflow system from zero** — every vendor its own site, **PO-to-invoice-to-approval in one view**; still in use today.

SELECTED PROJECT IMPACT

Built the System the Operation Runs On — Procurement

Purchasing, invoice approval, and supplier communication were scattered across spreadsheets and long email threads, and invoices were being missed. I taught myself **SharePoint and Power Automate** after hours and built the **central workflow system from nothing** — every vendor with its own site, POs and invoices and approvals visible in one place. **Missed invoices dropped sharply**, and the system is still running today.

TECHNICAL SKILLS

Systems I Build

SQL-backed company platform (**rbrpmrealty.com**, **196-table PostgreSQL on Azure**), personal resume site (evayangscm.com), AI tools built with Claude Code and Codex, SharePoint and Power Automate workflows, KPI and risk dashboards, **ERP implementation**

Supply Chain

supplier sourcing and execution, cost optimization, MRP, material planning, shortage recovery, BOM lineage and change control, international logistics

Analytics

depletion and safety-stock modeling, forecasting, spend analysis, Advanced Excel, SQL, data modeling

Fluency

M.S. Mathematics, reads drawings and BOMs, learns languages on demand, earns credibility with operators

LANGUAGES

Mandarin Chinese · Native

English · Bilingual
